

2024
Line construction Equipment

Our Vision:

Excel to be a global market leader in our field, setting standards in our industry by producing and trading a wide range of innovative tension stringing and other equipment in symbiotic relation with ZECK Germany.

Our Mission:

- Develop and manufacture products with unique features and of outstanding quality.
- Achieve maximum benefit for our clients.
- Develop excellency in products/service/and on time delivery.
- Fulfill our employees with pride about being part of Zeck TSE and the ZECK group of companies.
- Enhance the capabilities of our employees with opportunities to improve their functional knowledge and skills.
- Increase our competitiveness by continuously improving internal and external processes.

Our company ZECK TSE International Ltd.

Established in 2011, Zeck TSE International Ltd. is a subsidiary of Germany's ZECK GmbH, one of the most trusted international specialists in Tension Stringing Equipment (TSE) for power transmission line construction. Rooted in a family-owned legacy spanning over a century, Zeck TSE inherits 58 years of ZECK GmbH's expertise in designing and manufacturing Tension Stringing Equipment.

Initially, the company focused on braided wire ropes in Thailand, but has continuously expanded its product range over the years. Today, Zeck TSE exports a wide range of products and manages sales and service for ZECK GmbH in Asia, the Middle East and large parts of Africa. Strategically located in the Eastern Economic Corridor in Chonburi near Bangkok and only 30 kms away from the international deep seaport Laem Chabang, the company's 16,000 m² factory employs 90 dedicated professionals.

Diversifying into Underground Utility Construction, Zeck TSE represents top European manufacturers in Thailand for the cable ploughing system "Spider Plough" (Foeckersperger) and fibre optic cable installation technologies (CBS), signaling its commitment to emerging markets.

Our mother company ZECK GmbH in Germany

Founded in 1918 post-World War I, ZECK GmbH evolved from an agricultural machinery focus to become a world leading developer and manufacturer of Tension Stringing Equipment. In October 2020, the company celebrated the production of its 10,000th machine, an 18-ton Puller-Tensioner WB 1800/18. With around 250 highly skilled employees, ZECK GmbH excels in technical innovation, user-friendliness, and after-sales service. The company is frequently awarded as one of the best medium-sized machine manufacturers in Germany and serves as a model for its Thai subsidiary, Zeck TSE International Ltd.

For the complete product range please refer to the catalogue of ZECK GmbH, Germany www.zeck-gmbh.com

Our Service

After Sales

For almost a century, ZECK has championed the cause of delivering extensive and dependable after-sales services. We are committed to offering our valued customers individual assistance that meets their specific needs whenever they need it.

Together with our mother company in Germany, ZECK GMBH, and our various other locations, we are able to send our most experienced technicians to assist you globally within 24 hours.

- Services:
- Spare Part Delivery
 - General Overhaul
 - Machine Transport
 - Commissioning
 - Customer Service
 - Safety Check
 - General Inspection

Technical Support

Do you need technical support or replacement parts? ZECK customers can call our technical support Monday to Friday from 07:00 am to 04:30 pm

To be able to process your case quickly, please have the exact machine data ready:

- Type (on the typeplate right corner below)
- Chassis No. (typeplate bottom right, second line)

Tel : +66 63 193 4471 E-Mail : rp@zeck.co.th

Rental Machines

If you only need a ZECK machine temporarily, we've got you covered: Our fleet of rental machines is ready when you are, offering quick solutions at budget-friendly rates.

Unlock the power of ZECK machines without the commitment of a big investment!

We are here for you, offering instant assistance.

Tel : +66 62 229 1645 E-Mail : info@zeck.co.th

Sustainability: A Holistic Commitment

Sustainable development is an important principle for all of us at ZECK TSE as we recognize the profound impact it has on our collective future. Our dedication to protecting the planet goes beyond technological advancement: It embraces a holistic approach that prioritizes people, ethics, and the environment, aligning with the UN development goals.

Sustainable Technologies: At ZECK TSE, we actively work towards reducing emissions, enhancing energy efficiency, and promoting renewable energy sources. Our machines are equipped with low-emission engines and automated controls, optimizing operations to minimize errors, lower pollutants, and increase energy efficiency. Continuous updates prioritize emission reduction, engine electrification, and components designed to prevent fluid leakage.

Environmentally Friendly Production: In our Chonburi factory, efficiency, safety, and quality are paramount throughout the production process. We lead the way in the Thai industrial production landscape by minimizing the use of environmentally harmful materials and ensuring proper waste disposal practices.

Socially Responsible, Supportive, and Safe Workplace: Our commitment to sustainability extends into the workplace, where we prioritize people and ethical practices. Guiding principles include upholding human rights, fostering a positive work environment, maintaining ethical conduct in business operations, and nurturing respectful relationships with stakeholders.

3 GOOD HEALTH
AND WELL-BEING

Critical vaccines and free health check-ups for all employees.

4 QUALITY
EDUCATION

Scholarships to empower individuals in advancing their skills, refining their roles, and contributing to the collective knowledge of the organization.

5 GENDER
EQUALITY

Equal rights to benefits and preventing any form of wage discrimination.

8 DECENT WORK AND
ECONOMIC GROWTH

Promoting equal opportunities in employment, fostering job growth, and supporting youth employment through training initiatives.

9 INDUSTRY, INNOVATION
AND INFRASTRUCTURE

Build infrastructure that is both safe and resilient, with a steadfast commitment to sustainability.

10 REDUCED
INEQUALITIES

Virtually no inequalities in our company.

12 RESPONSIBLE
CONSUMPTION
AND PRODUCTION

Locally sourced raw materials, Waste reduction and recycling of waste.

17 PARTNERSHIPS
FOR THE GOALS

Various MOUs to manage the exchange of best practices with business partners and the Royal Thai Vocational Education Commission to strengthen collaboration and support of vocational education initiatives.

Puller 50 kN

This machine is a compact, light and very powerful hydraulic double capstan winch for pulling of a single rope with up to 50 kN force. For heavy duty tower erection, cable pulling and other applications it is ideally suited. It comes with an integrated rope storage drum, hydraulic reelwinder and rope level wind. The capacity of the drum is 350 m of for instance 16 mm rope. For longer pulls a separate reelwinder can be attached to an optional available hydraulic power take-off.

Part No.	Description
PUL-01-05	Standard version on steel frame and lockable aluminum cover with gas spring suspended flaps
PUL-00-01	1-Axle chassis with rigid axle for up to 30 km/h (construction site operation, without official approval for road service)
PUL-00-02	Hydraulic crawler chassis

A basic version without rope storage drum, hydraulic reel winder and level wind is available upon request (product number PUL-05-02).

PULLER PERFORMANCE

max. pulling force:	50 kN
max. speed:	26 m/min
speed at max pulling force:	26 m/min 10 m/min
min. speed at continuous pulling force:	2 m/min.

BULL WHEELS

number of bull wheels:	2
diameter of bull wheels:	255 mm
groove diameter:	22 mm
max. rope diameter:	22 mm
drum capacity/max rope length (Ø20 mm)	22 mm

DIMENSION/WEIGHT (PUL-01-05)

length x width x height:	1600x1650x1165 mm
weight:	900 kg

ENGINE

- max. 16.5 kW (22.1 hp)
- Honda GX690 with electro start

DRIVE SYSTEM

- hydraulic drive system
- bull wheel with completely closed drive unit (motor+brake+gear box) for minimal maintenance and high efficiency
- automatically activated safety brake system

CONTROL SYSTEM

- control of rope in/out via hand lever
- control instrument for the pulling force

GENERAL FEATURES

- steel frame with anchoring eyes

Ginpoles

Ginpoles are used for the erection of transmission line or telecom towers. In combination with lifting winches they function similar to crane arms. Once the tower has been erected up to a certain height, the Ginpole is lifted and anchored within the tower structure for further erection until the complete tower is mounted.

We fabricate Ginpoles made of high tensile aluminium with safe lifting loads from 10 kN up to 50 kN (pos.1, vertical). The standard lengths of our Ginpoles range between 8 and 30 meters. Standard wise we produce Ginpoles with the superior **internal rope guidance system**, which has integrated pulleys for the guidance of the rope. Upon request we also produce Ginpoles with **external rope guidance system**. We also produce longer Ginpoles upon request.

Lifting load is indicated in 3 positions: pos.1 vertical, pos. 2 with 20 degree inclination installed in the tower center, pos. 3 with 20 degree attached to a towerleg.

Please note: operation of the Ginpole always requires some inclination.

Part No.	Total length (m)	C - safe working load (SWL) (kN)			Sections (m)	Weight* (Kg)

max. lifting rope dia. For GPI - 01/02 : 11 mm

max. lifting rope dia. For GPI - 03/05 : 14 mm

* The weight indication includes Groundplate as well as Ginpole Heads and Ginpole Feet with integrated snatch blocks (for superior internal rope guidance)

1. Assembly and Positioning of the Ginpole.

2. Using the Ginpole on the ground.

3. Lifting the Ginpole.

4. Using the Ginpole as a centrally placed floating Ginpole.

Pulling Ropes (Braided Steel)

“Performance” Series

Our braided steel wire ropes are torsion free because they are made of equal numbers of left and right winding wire strands. This makes them the perfect choice for conductor stringing with double capstan pullers.

These ropes are made of superior quality strands. The properties of our wire rope combine long endurance with high tensile strength. The strands are individually lubricated and manufactured in strict compliance with European standards.

SWR-XX-XX with optional marking tape

“Ultimate” Series

Our unique heavy duty HD ropes are now classified with a name that better reflects their exceptional properties: *Ultimate Ropes*.

The strands of these ropes are compacted, resulting in significantly less friction within and between strands. This shifts the focus of their properties to the two factors that really matter: strength and durability. The surface of the compacted strands is smoothed, which minimizes the likelihood of them climbing out of the pulley sheaves, especially under angled pulls. The higher breaking load of the Ultimate rope is achieved without an increased carbon content of the steel, thereby not sacrificing endurance in favor of breaking strength.

Steel Reels

Our steel reels are welded of steel tubes and finished with a high quality painting. Optionally we supply them hot-dip galvanized. For ZECK Pullers we optional supply them with welded or lasered crossplates. These reels are available in sizes of 520 up to 1,900 mm diameter. Detachable reels are supplied for re-conductoring works, when the wound up conductor needs to be scrapped. For extra long lengths of wire rope we supply galvanized steel drums with a capacity up to 13,000 KG.

For special lengths of wire rope we supply steel drums of any customized size and strength.

Drum Stand for Overhead Stringing

Thanks to its easy transportability and capacity to install conductor drums without use of a crane this design is the most popular among transmissionline contractors worldwide. With the drumshaft being inserted conductor drums can be lifted by crane or manually rolled into the drumstand. Once in operating position the drumshaft will be rested on a mechanical holding device, so that the hydraulic jacks are freed from any constant load. The drumstand DST is equipped with two disk brakes for stationery purpose. For most efficient operation we highly recommend the use of hydraulic drum-drive motors.

Hydraulic Reel Winder

The hydraulic reel winder, compatible with standard steel reels, is powered by either a ZECK machine or a ZECK hydraulic power unit. It features manually operated hydraulic cylinders equipped with a plug-in axle, facilitating swift and effortless loading and unloading of reels.

- Hot-dip galvanized, robust steel frame with anchoring eye bolts and forklift fixtures
- Disk brake system for the controlled tensioning of the rope without hydraulic support
- Automatic rope guiding device
- Special designs on request

Pulley Blocks for Helicopter Stringing – Aluminum Sheaves

- Aluminum sheave molded in one piece for increased stability
- For single conductor, 2-, 3-, or 4-bundle
- Hinge mechanism, ball bearing mounted, for automatic insertion of the rope
- Galvanized steel frame with clevis attachment rotatable by 90°
- Bolted groove liners for easy exchange
- Maintenance-free ball bearings with high safe working load

Optional

- Groove liners of polyamide or aluminum
- Alternative distance between sheaves (H)
- Fixed clevis
- Grounding device with conductor rollers (used on polyamide groove liners)
- Grounding device with laterally mounted disk with carbon brush used on aluminum groove liners
- Special designs and breaking load on request

With pressure roller for aluminum and polyamide groove liner OPTIONAL: with carbon brushes

With laterally mounted disk and carbon brush

Grounding Cable with clamp

Optional Equipment

Part No.	Description	Specs
HPB-00-01	Grounding device for high induced currents: Single Sheave	Current induction 3.5 kA / 0.4s
HPB-00-03	3-Sheave	Conductor rollers for Nylatron sheaves or polyamide groove liners
HPB-00-05	5-Sheave	Laterally mounted disk and carbon brush for aluminium groove liners
Optional Items		
	Aluminum conductor clamp	clamping from 5-60 mm \varnothing 50 mm ² , length 10 mm
	Copper grounding cable with transparent insulation	
	Steel grounding clamps	for round conductors and frames up to 33 mm
Please specify version and optional items when ordering		

Array Block

Our helicopter frame array blocks are engineered for smooth pivoting, ensuring optimal alignment, precise tension control, and reduced wear on conductors. The high center of gravity allows the block to be very responsive and easy to manipulate when positioning it at various angles, allowing for finer control and easier handling.

Compatible with headboards, swivels, ropes, cover joints, and other standard and helicopter pulley equipment.

Available in three sizes to suit various conductor configurations, our array blocks are the ideal solution for applications requiring a large bending radius with ease of use and efficient handling.

Features:

- Frame: Steel – optional finish hot-dip galvanized or painted
- Wheels: Different configurations to choose from:
 1. Cast iron sheaves for center wheels, Nylatron sheaves for side wheels
 2. All cast iron sheaves
 3. All Nylatron sheaves
 4. All aluminum sheaves
- Integrated earthing device

Hold-Down Block

The hold-down block is designed to keep ropes securely aligned on the ground during the tension stringing process. Constructed with a steel frame and high-strength nylatron sheaves, these blocks ensure stability and precision, preventing ropes from shifting or tangling.

Part No.	A (mm)	B (mm)	C (mm)	D (mm)	E (mm)	F (mm)	G (mm)	Breaking load (kN)	Working load (kN)	Weight (kg)

Pulley Block Storage System

Our versatile Pulley Block Storage System doubles as a transport box and a stackable storage shelf. It is custom-made for a wide range of block designs and sizes and available in two finishes: hot-dip galvanized and painted.

Part No.	Specs
SPB-01-00	Sizes and designs are created upon customer specification. One unit can usually fit 5-7 single blocks, 3-5 triple blocks or 2-3 five-sheave blocks.

Single unit with Tandem Pulley Block TDB-05-0850

Safe and economic pulley block storage solution

Optimum utilization of container space

Joint Protectors

When conductor midspan joints are compressed during the process of pulling conductors over the towers they need to be covered with an enclosure which prevents them from bending while travelling through the Pulley Blocks.

Designed to protect mid-span joints while being pulled over Pulley-Blocks during stringing

Please specify on the order:

- Mid-span joint
- Conductor diameter
- Max. compression sleeve OD
- Length after compression

Part No.	OD (mm)	Min. pulley groove width (mm)	Max. CS Ø	CS length after compression max (mm)	TL* (mm)	BL (kN)	Weight (Kg)
JOP-01-001	60.30	68	49	698	1038	2-5	6.75
JOP-01-002	73	80	58	829	1169	max 6.5	11.05

OD - outside diameter **CS** - compression sleeve **O.D. CS** - outside diameter of compression sleeve
TL - total length including rubber insert

* total length of joint protectors can be made up to order.

OPGW Counterweight

This device has the function to prevent rotation of OPGW during the stringing process. The new and very flexible design prevents problems when pulling over angled towers. We recommend using two counterweights to avoid rotation while one is on a pulley block. Delivery includes clamp unit and counterweight (approx. length 3 m), to avoid twisting

Part No.	No of counterweights	A (mm)	B (mm)	C (mm)	OPGW	Weight (Kg)
OCW-01-01	1	60	2930	38	10-17	5

Customization options available upon request.

Please specify when ordering:

- Rope Ø
- Groove Ø of pulley block

Hydraulic Compression Tools

Our hydraulic compression units manufactured by our long year partner Sanwa Tekki Corporation are particularly light, efficient and convenient to use. We supply the hydraulic hose connections with “flat-face” hydraulic couplers, preventing the intrusion of dirt into the hydraulic system. They are equipped with double acting hydraulic cylinders with very fast compression cycle and highest reliability.

Compression Head HCH-01-0200

Part No.	Compression Force (ton)	Operating pressure (bar)	Max exterior Ø of compression (mm)	Max stroke (mm)	Weight (Kg)

Power Unit HPU-02-0700

Compression Head HCH-01-0100

Hydraulic Power Unit

A strong and reliable power unit with integrated valve control. Like the hydraulic compression head, it is equipped with “flat face” quick-action coupling for prevention of dirt intrusion.

In addition to the trusted HPU-02-0700, manufactured by Sanwa Tekki Corporation, Zeck now offers the new in-house development HPU-01-0700, which offers maximum reliability through three independent hydraulic filter systems.

Part No.	Engine	Dimensions LxWxH (mm)	Weight (Kg)

Suspension Ladders

These ladders are designed to be used in hanging position at the tower-cross arms for performing works, for instance at the insulator chains. They can be used also as anchoring ladders if supplied with the optional foldable conductor hook or tower- and conductor hook (SLA-00-02 or SLA-00-03). If supplied with the optional available anti-fall system (SLA-00-01) the ladder is supplied with a guide rail on the left side.

The tower hook is made of galvanized steel and equipped with a safety chain to prevent accidental fall down of the ladder. The ladder itself is a welded structure of first grade extruded aluminum pipes. The rungs are corrugated for slip protection. The working load in hanging position is 3 kN. If used as anchoring ladder (with optional SLA-00-02 or SLA-00-03) the maximum allowable working load is 1 kN.

Different dimensions are available upon request.

We test our suspension ladders in compliance with specific testing guidelines developed by TÜV, Germany.

other length available upon request
anti-slip aluminium plate is weight per 2 meters length

Working Platforms for jumper construction

These platforms provide linesmen a safe working area at Tension Towers, particularly for the construction of conductor jumpers between insulator chains. They consist of a tubular structure of welded aluminium pipes. In the centre they are equipped with a suspension device and at both ends with anchoring points.

We particularly recommend to equip the platforms with the optionally available sheet metal stepping ground, which increases safety of the linesmen significantly. Optionally available is furthermore a second Anti-Fall Barrier.

Sagging Thermometer

This thermometer is for measuring the conductor temperature during sagging process. The measuring range is from -20 to 80 degree Celsius, it is delivered with calibration certificate and transport case.

Part No.	Weight (Kg)
STN-01-01	0.6

Sag Scope

During the sagging process this device allows accurate monitoring of the conductor sag. It is equipped with a fine adjustment on all axles comes with tower mounting fixture and transport case.

Part No.	Magnification & Objective Lens	Length (cm)	Weight scope only (g)
SCO-01-01	3-9x40	31	340

Spacer Key

A smart tool for the installation of spacers on the rope. Used like a customized set of pliers, the design ensures precise and secure spacer installation, significantly reducing downtime and enhancing overall workflow efficiency. Strong, lightweight, and easy to use. Made of aircraft-grade aluminum with anodized grip.

Part No.	Max. mouth opening (mm)	Clamping range (mm)	Weight (Kg)

Line Cars - Overview

Our precision-engineered line cars provide a lightweight and convenient means for operators to travel along the conductor lines between towers. These inspection trolleys allow linemen to traverse the conductors safely to perform their tasks (e.g. spacer installation, inspections, installation of aircraft warning balls) high above ground. More details on the various models can be found on the following pages.

Line Seat (for single conductor/earth wire)

Part No.	Description	SWL (Kg)	Dimension LxWxH (mm)	Weight (Kg)
LSE-01-01	Line Seat for single conductor/earthwire	100	960x795x1120	19

The Line Seat can be easily moved over single conductor or earth wires, for instance for installation of aircraft warning balls, vibration dampers. It is equipped with two combined stationery and dynamic brakes.

Please note: When riding over single conductors/ earth wires a safety line with sufficient breaking load needs to be installed.

Line Car with Drive Unit (gasoline) - “New Generation” - One operator / Single conductor / Tower surpassing ability

Our newly developed Line Car LCA-01-01 is a Zeck TSE exclusive, capable to surpass over suspension towers through four openable wheel arms. It is powered by a 6.3 KW Honda gasoline engine which drives a hydraulic pump and motor on two axles.

Without being pulled by external force it can travel along conductor spans and climb slopes up to 25% inclination with a maximum speed of 40 m/min.

The hydraulic system serves as a very effective dynamic brake. Like all our line cars, the LCA-01-01 is also equipped with a mechanical parking brake and a distance counter.

Part No.	Description	Safe Working Load (kg)	Conductor Dia. Range (mm)	Dimensions LxWxH (mm)	Weight (kg)
LCA-01-01	Single conductor	150	6-50	1605x840x2080	150

LCP-00-02	Lifting Device	500 kg	9 kg
LCP-00-03	Fire Extinguisher	-	2 kg

Line Car - “New Generation”

- One operator / 2-4 conductors / Tower surpassing ability

Our “New Generation” Line Cars are equipped with four wheels, mounted with independent suspension systems instead of rigid axles. The Line Cars are easier to mount on the conductors and capable to surpass suspension towers with a T-bar. Thanks to the innovative mechanism with only four wheels, they surpass suspension towers in less time.

Standard Features

- Rubber wheels
- Lightweight aluminum frame
- Four lifting points
- Distance Counter

Part No.	Description	Safe Working Load (kg)	Spacing between conductors (mm)	Dimensions LxWxH (mm)	Weight (kg)
LCP-03-02	2-bundles	150 kg	400, 450, 500, 520	1900x820x1570	123

Lifting Device (LCP-00-02)

Line Car with Drive Unit (electric-driven)- “New Generation” - One operator / 2-4 conductors / Tower surpassing ability

The new Line Car LCE-01-xx is equipped with a power unit featuring four electric motors, collectively providing 1000W of power. Supported by two 24V DC batteries with a combined capacity of 150 Ah, the system enables the cart to operate continuously for up to three hours on a single charge. Without being pulled by external force it is capable to travel along conductor spans and climb slopes up to 20 % inclination. The maximum travelling speed is 43 m/min. The electric system serves also as a very effective dynamic brake. Like all our line cars, the LCE-01-xx is additionally equipped with a parking brake.

With four wheels mounted on independent suspensions, the line car can easily and safely pass over suspension towers without the need to be lifted up and down at each tower.

Standard Features

- Rubber wheels
- Lightweight aluminum frame
- Four lifting points
- Distance Counter

Part No.	Description	Safe Working Load (kg)	Spacing between conductors (mm)	Dimensions LxWxH (mm)	Weight (kg)
LCE-01-02	2-bundles	150 kg	400, 450, 500, 520	1900x820x1570	249
LCE-01-03	3-bundles	150 kg	400, 450, 500, 520	1900x820x1570	255
LCE-01-04	4-bundles	150 kg	400, 450, 500, 520	1900x820x1570	260

Optional Equipment:

Part No.	Description	Safe Working Load (kg)	Weight (kg)
LCP-00-02	Lifting Device	500 kg	9 kg
LCP-00-03	Fire Extinguisher	-	2 kg
LCP-00-04	Catch Net for fall prevention		

Line Car with Drive Unit (gasoline)

- Two operators / 2-4 conductors / Tower surpassing ability

The Line Cars LCA-02-xx are powered by a 6.3 KW Honda gasoline engine which drives a hydraulic pump and motors on two axles. Without being pulled by external force they are capable to travel along conductor spans and climb slopes up to 25 % inclination. The maximum travelling speed are 40 m/min. The hydraulic system serves also as a very effective dynamic brake. Like all our line cars, the LCA-02-xxx is equipped with a parking break.

With four openable axles and a jack for closing them, the LCA-02-xxx is capable to surpass over suspension towers.

Part No.	Description	Safe Working Load (kg)	Spacing between conductors (mm)	Dimensions LxWxH (mm)	Weight (kg)
LCA-02-02	2-bundles	250 kg	400-635	2716x1305x1800	215
LCA-02-03	3-bundles	250 kg	400-635	2716x1305x1800	220
LCA-02-04	4 bundles	250 kg	400-635	2716x1305x1800	225

Optional Equipment:

Part No.	Description	Safe Lifting Load (kg)	Weight (kg)
LCP-00-02	Lifting Device	500 kg	9 kg
LCP-00-03	Fire Extinguisher	-	2 kg

Lifting Device (LCP-00-02)

Line Car - *One operator / 2-4 conductors*

The LCP-01-xxx line cars are designed for single-operator use. They are equipped with a parking brake and a dynamic disk brake.

A meter counter is included as standard equipment.

Part No.	Description	SWL (Kg)	Spacing between conductors (mm)	Dimensions LxWxH (mm)	Weight (Kg)
LCP-01-02	2-bundles	150	400-510	1178x820x1410	62
LCP-01-03	3-bundles	150	400-510	1178x820x1410	65
LCP-01-04	4 bundles	150	400-510	1178x820x1410	66

Line Car

- *Two operators / 2-4 conductors / Tower surpassing ability*

Our models LCP-02 are designed for a safe working load of 250 KG. The four axles can be opened in sequence. This enables the Line Car to pass over suspension towers instead of lowering it down and lifting it up again at every tower.

The Line Car LCP-02 is welded of superior aluminium alloy and equipped with meter counter and parking brake. Within the scope of supply is also a dynamic brake system by two hydraulic activated disk brakes.

Upon ordering the distance between the conductors need to be specified.

Part No.	Description	SWL (Kg)	Spacing between conductors (mm)	Dimensions LxWxH (mm)	Weight (Kg)
LCP-02-02	2-bundles	250	400 - 510	2078x820x1270	90
LCP-02-03	3-bundles	250	400 - 510	2078x820x1270	96
LCP-02-04	4-bundles	250	400 - 510	2078x820x1270	100

Line Car - *One operator / Single conductor*

The Line Car is like the Line Seat used for traveling over single conductors or earth wires for installation of aircraft warning balls, vibration dampers, etc. The operator is positioned in a trolley. This model is equipped with stationary brake plus dynamic disk brake. A meter counter is included in the standard equipment.

Please note: When riding over single conductors/earth wires a safety line with sufficient breaking load needs to be installed.

Part No.	Description	SWL (Kg)	Dimension (mm)	Weight (Kg)
LCP-01-01	single conductor / earthwires	150	645x725x1956	43

Line Car - *Two operators / Single conductor*

Line car for 2 people, suitable to work on single conductor or earth wire. Welded from stable and high-strength aluminum. It is equipped with parking brake as well as dynamic disk brake with two parking brakes and large nylon wheels with a diameter of 440 mm. A meter counter is included in the standard equipment.

Part No.	Description	SWL (Kg)	Dimension LxWxH (mm)	Weight (Kg)
LCP-02-01	single conductor / earthwire	200	2500x750x2186	100

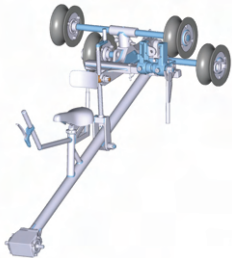

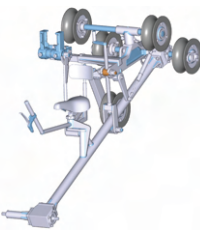

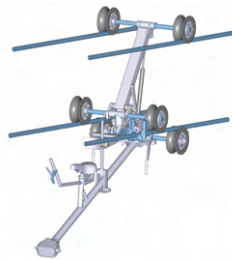

Line Bicycles

Line Bicycles allow linesman to safely travel along transmissionline conductors and earthwires. The advantage towards Line Cars is that they are muscle powered. Without any motorization the operator can pedal along the line for inspection, installation of spacers, vibration dampers or aircraft warning spheres. Models for single conductor, twin, triple, quad-bundled conductors are available

Characteristics:

- High-tensile ball-bearing mounted neoprene sheaves with fall protection
- Static braking device with jaws locking on conductors, controlled by lever
- Dynamic disc braking device at the drive shaft, controlled by lever
- Adjustment to conductor spacing between 400 and 510 mm
- Comfortable sitting position
- Fall protection
- Meter counter device

Railway Construction Equipment and Catenary

ZECK GmbH manufactures highly specialized machines for the railway construction industry:

- Working platforms and baskets
- Dumpers and trailers
- Catenary installation units (“wiring trains”) mounted on
 - Rail-bound vehicles
 - Railroad trucks

ZECK catenary installation units guarantee careful and precise installation of catenary. The machines can be designed according to individual client specifications. The units are mounted on railway vehicles or wagons employed in building urban and intercity railways, enabling compliance with local regulations.

Please contact us for further information about machines, technical details and services.

CBS **PRODUCTS**

Leaders in Advanced Cable Installation Equipment

CBS Products Ltd., Oakham, United Kingdom

CBS Products is at the forefront of cabling technology, the design and manufacture of installation equipment for LV Distribution lines, Railway Tracksides and underground CATV / Telecommunication networks, including the handling of Fibre Optic Cables. They offer also offer a comprehensive range of standard equipment.

Foeckersberger

Walter Fockerperger GmbH is a manufacturer of a unique pipe and cable laying plow system. The system works as follows:

A winch crawler equipped with a large anchor spade is positioned 110 meters ahead of the plow, firmly anchoring itself into the ground to ensure stability before commencing the pulling process. Once the plow is in motion, it efficiently installs cables or pipes at a rate of 100 meters in just 3 to 15 minutes, depending on various factors such as laying depth and ground conditions.

In optimal conditions, the system can achieve installation speeds of up to 1,500 meters per hour, making it a highly efficient solution for your projects. What's more, the cable laying plow is designed with adjustable wheels, enabling it to seamlessly adapt to undulating terrain, overcome slopes, ditches, and other obstacles with ease.

Benefits in one view

- Innovative system for trenchless pipe and cable laying
- The world market leader in the field of trenchless pipe and cable laying
- The world's strongest winch and laying-plough systems with up to 360 tonnes of tractive force
- Used on every continent and on any terrain
- Incredible performance: 10.000 metres per day and a maximum pipe diameter of 630 mm
- Ecological and sustainable - no trench, minimum impact on the natural environment
