

ENVIRONMENTAL POLICY

Zeck TSE International Ltd. is actively involved in environmental protection and the health of our employees. We have analyzed the context and operational activities in our company and defined the following guidelines regarding the protection of environment and health:

We use raw materials and energy sparingly. This includes the use of eco-friendly materials, modern and eco-friendly technologies as well as the safe disposal or processing of waste and sewage.

We continuously work towards reducing environmental damages. This is defined in our corporate goals and/or environmental program. The degree of implementation of our goals and the defined measures are analyzed regularly.

In order to determine trends, we continuously measure and document consumption figures and emissions. The goal is to constantly improve our environmental figures..

Environmental protection starts with each employee. We support the individual responsibility by educating and sensitizing our employees in all areas of corporate environmental protection. Our management and executives model our environmental policies.

The managements advocates for providing the necessary resources and the employees contributing to the effectiveness of our environmental and health protection shall receive effective support.

The company commits to comply with existing laws and regulations as well as requirements of interested parties, such as authorities and clients.

Our employees' health is important to us. Zeck TSE International Ltd. offers various options for our employees to actively and passively contribute to their health. This includes measures from our corporate health management or occupational-medical care.

We provide a safe working environment. An industrial safety organization has been set up and implemented. Besides other technical personnel, this consists of safety engineer, safety representatives, first aiders and fire protection officer.
